

QUIZ APP SOFTWARE DEVELOPMENT

Week 3 Project Report
User Interface Development

Project	Quiz App
Week	Week 3
Topic	User Interface Development
Technology	Java Swing, JFrame, JButton, Event Handling

1. Introduction

The Quiz App is a Java-based software project designed to provide a simple and user-friendly quiz experience. In Week 3, the project focuses on developing the graphical user interface (GUI). The main objective is to create the application window, design the Main Menu, add navigation options, and handle button actions using Java Swing.

2. Week 3 Objectives

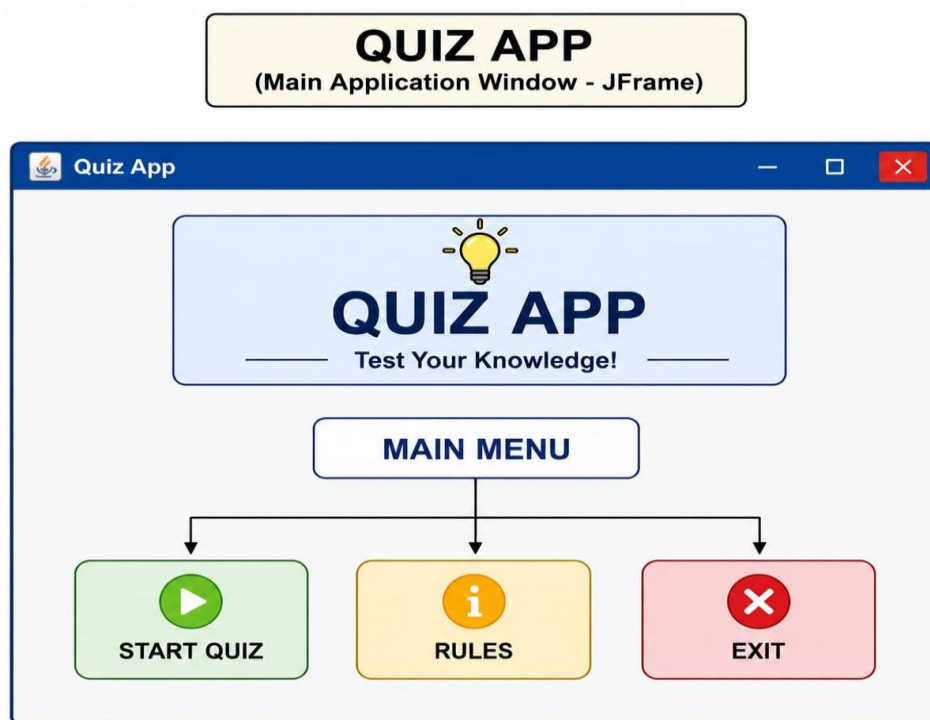

The main objectives of Week 3 are:

- Create application window.
- Design Main Menu.
- Add Start Quiz, About and Exit options.
- Create navigation system.

3. Main Application Window

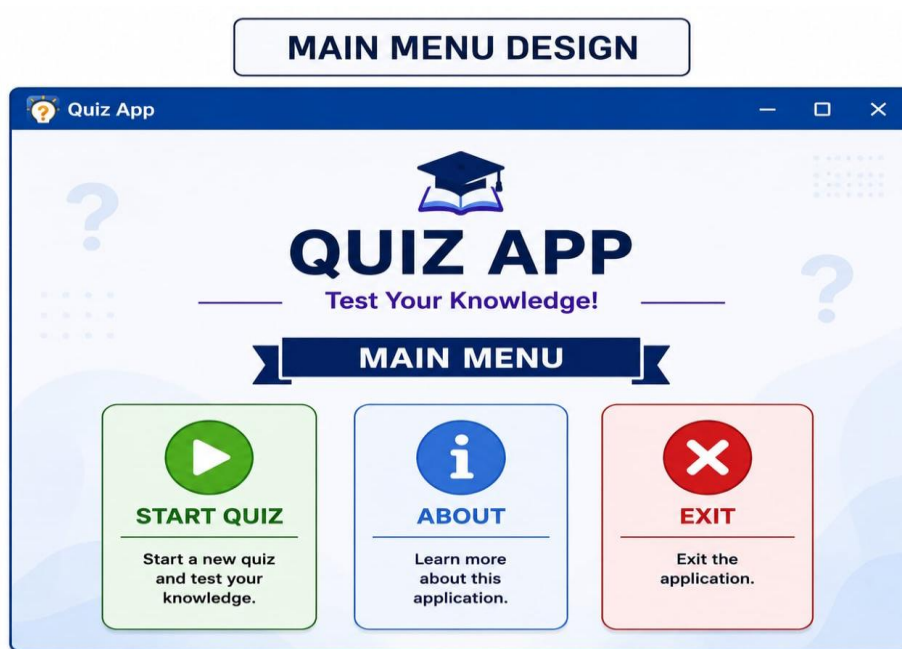

A JFrame is used as the main application window. It provides the basic structure of the GUI and acts as

the main container for the Quiz App interface. The window contains the project title and provides access to the Main Menu.

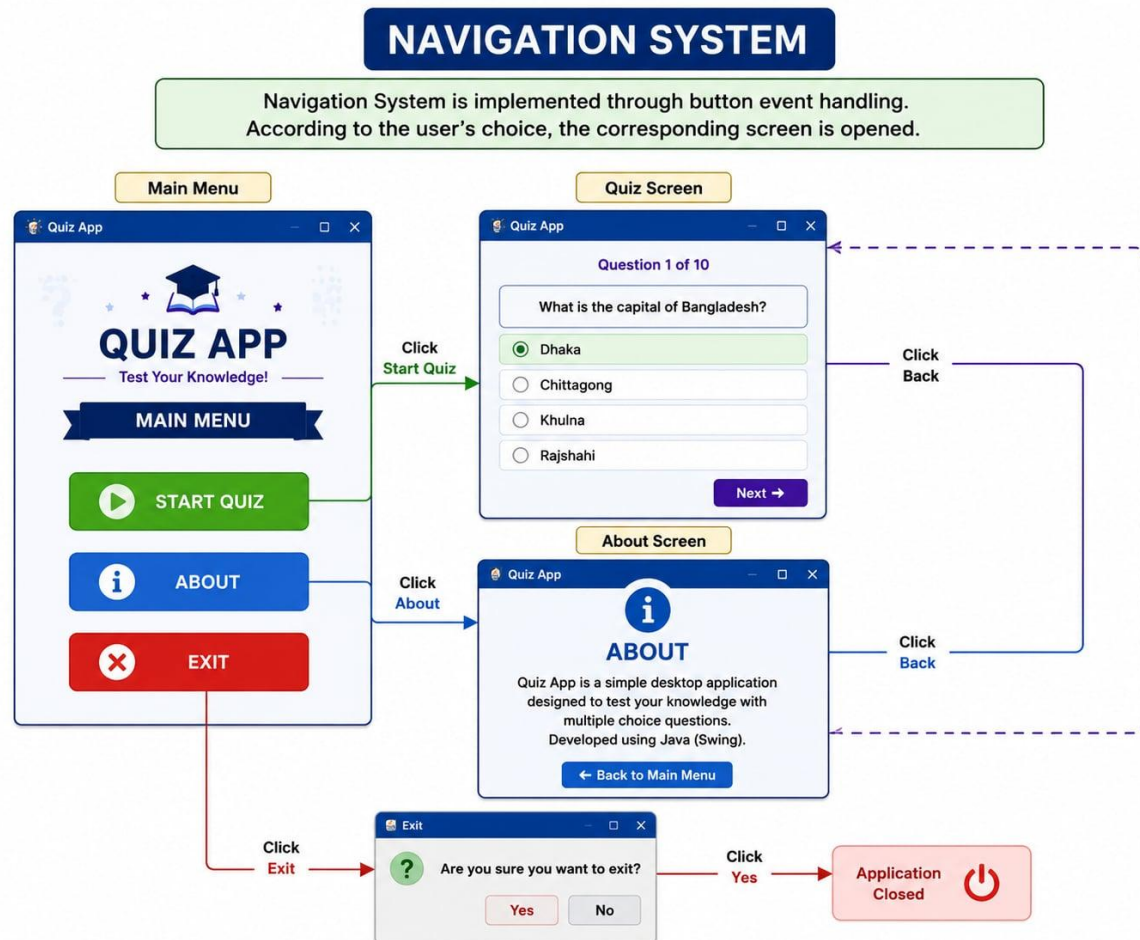

4. Main Menu Design

The Main Menu is the starting point of the Quiz App. It provides access to the major functions of the application. The planned menu options are Start Quiz, About and Exit .

5. Navigation System

A navigation system is implemented through button event handling. When a user clicks a menu button, the corresponding screen is opened. The Start Quiz button opens the quiz screen, the About button opens the About screen, and the Exit button closes the application. Back buttons can be used to return to the Main Menu where required.

6. Technologies and Concepts to Learn

Technology / Concept	Purpose
Java Swing	Used to create the graphical user interface.
JFrame	Used to create the main application window.
JButton	Used to create clickable buttons such as Start Quiz, About, and Exit.
Event Handling	Used to perform actions when the user clicks a button.

7. GitHub Upload

The Week 3 implementation will be uploaded to the project GitHub repository. The required materials are:

- Main Menu Source Code
- GUI Design Files
- Related Java source files required to run the GUI

8. Demonstration

At the end of Week 3, the project should demonstrate a working Main Menu and a functional navigation system. The application should open successfully, display the Main Menu, respond to button clicks, open the Quiz and About screens, and allow the user to return to the Main Menu where applicable.

Demonstration Flow:

Run Application → Main Menu → Start Quiz / About / Exit → Corresponding Screen or Exit

9. Expected Outcome

After completing Week 3, the Quiz App will have a basic working graphical interface. Users will be able to interact with the application through buttons and navigate between the main screens. The GUI will provide the foundation for implementing the quiz functionality in later weeks.

10. Conclusion

Week 3 focuses on developing the graphical user interface of the Quiz App. By using Java Swing, JFrame, JButton, and event handling, the project will provide a simple and organized interface. The completed Main Menu and navigation system will prepare the application for further development.
