

QUIZ APP SOFTWARE DEVELOPMENT

Week 5 Project Report

Quiz Gameplay Implementation

1. Introduction

The Quiz App is a Java-based software project designed to provide a simple and interactive quiz experience. In Week 5, the project focuses on developing the Quiz Gameplay Implementation. The main objective is to implement answer selection, add Next Question functionality, track user responses, and display the selected answers during the quiz.

2. Week 5 Objectives

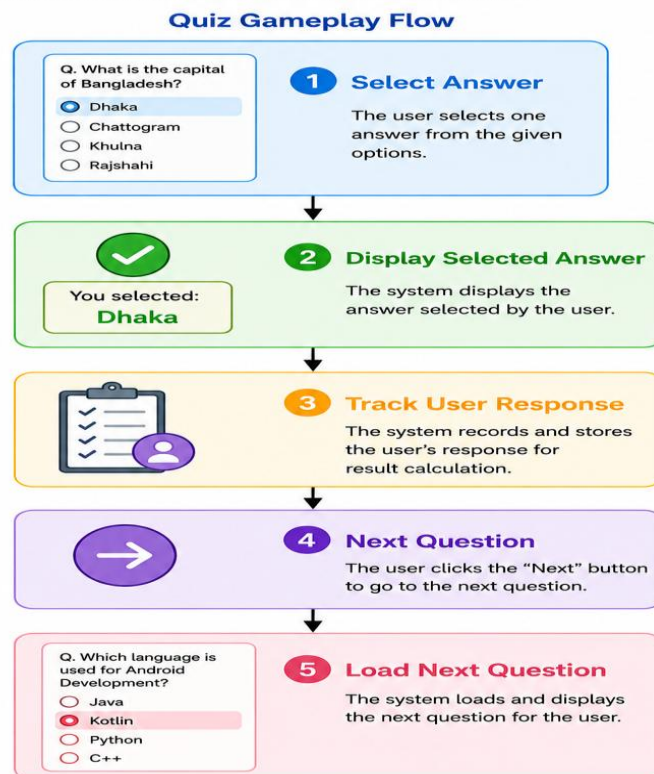

The main objectives of Week 5 are:

- Implement answer selection.
- Add Next Question functionality.
- Track user responses.
- Display selected answers.

3. Quiz Gameplay Implementation

3. Quiz Gameplay Implementation

The Quiz Gameplay Implementation is the main interactive part of the Quiz App. It connects answer selection, user input, response tracking, and quiz navigation into one working gameplay system. The user selects an answer, the system records the response, displays the selected option, and allows the user to move to the next question.

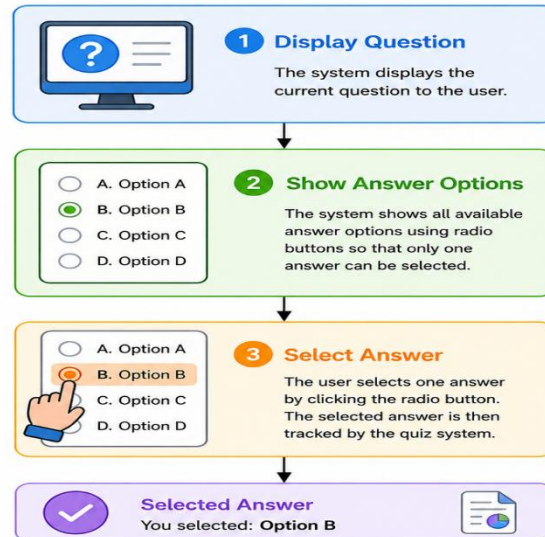

4. Answer Selection

4. Answer Selection

The Answer Selection system allows the user to choose one answer from the available options. Radio Buttons can be used so that only one answer can be selected at a time. The selected answer is displayed to the user and can be tracked by the quiz system.

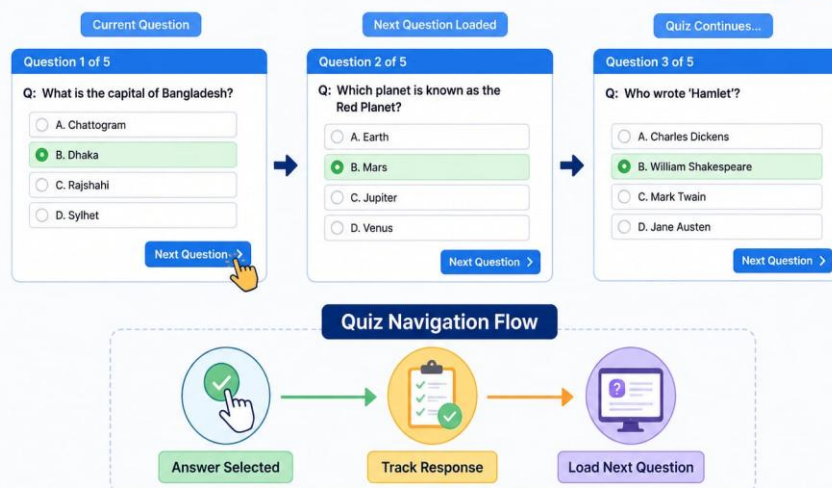

Answer Selection Flow

5. Next Question Functionality

5. Next Question Functionality

The Next Question functionality allows the user to move from the current question to the next question after selecting an answer. The system loads the next question and its answer options until the quiz is completed.

6. Response Tracking

The response tracking system records the user's selected answer for each question. This information can later be used to evaluate the user's responses and calculate quiz performance.

7. Technologies and Concepts to Learn

- Radio Buttons
- Event Driven Programming
- User Input Handling

8. GitHub Upload

The Week 5 implementation will be uploaded to the project GitHub repository. The required materials are:

- Quiz Logic Module
- Answer Selection Module

9. Demonstration

At the end of Week 5, the project should demonstrate a working Quiz Gameplay system. The user should be able to select an answer, see the selected answer, and navigate to the next question.

Demonstration Flow: Display Question → Select Answer → Show Selected Answer → Track Response → Next Question → Load Next Question

10. Expected Outcome

After completing Week 5, the Quiz App will have a basic Quiz Gameplay Implementation. The application will be able to handle answer selection, display the selected answer, track user responses, and provide navigation to the next question. This module will support the development of the complete quiz functionality in later weeks.

11. Conclusion

Week 5 focuses on developing the interactive Quiz Gameplay system. By using Radio Buttons, Event Driven Programming, and User Input Handling, the project will be able to manage answer selection and quiz navigation. The completed module will provide the foundation for tracking responses and continuing the quiz through multiple question
